Management:	**Mr. Oliver Bäte** — Chief Executive Officer, Allianz Group **Mr. Giulio Terzariol** — Chief Financial Officer, Allianz Group **Ms. Joan Wilson** — Head of Investor Relations
Call Host:	Mr. Dieter Schmidt — Deutsche Bank Securities

1. Executive Summary & Strategic Positioning

Oliver Bäte (CEO): Good afternoon, everyone. 2025 has been a transformative year of disciplined execution under our multi-year strategic framework. Amid macro-economic shifts, escalating natural catastrophe patterns, and fluctuating interest rate cycles, the structural agility of the Allianz portfolio has never been clearer. We have successfully mitigated inflationary risks across our Property-Casualty lines through proactive pricing cycles and claims management, while simultaneously capturing systemic inflows inside our Asset Management franchise. Our core focus heading into 2026 remains leveraging scale, pushing digital distribution boundaries, and reinforcing premium capital stability across all operating branches.

2. Deep-Dive Financial Indicators

Giulio Terzariol (CFO): Let me amplify the detailed metric layouts across our operating segments:

- **Group Consolidated Revenue Stack:** Scaled up to an unprecedented €162.5 billion, expanding by 7.2% year-on-year. This growth was distributed cleanly across our core geographical clusters, showing resilience in mature European markets and high single-digit momentum in expanding commercial zones.
- **Property-Casualty Segment Operating Leverage:** Contributed a record operating segment performance. The combined ratio optimized down to 91.4% despite a multi-billion euro drag from catastrophic climate occurrences in the third and fourth quarters, cushioned heavily by tactical reinsurance architecture.
- **Life and Health Outperformance:** New Business Margin reached an exceptional 5.8%, driven by structural client preferences migrating toward capital-light, hybrid products rather than traditional volatile guarantees.
- **Asset Management Outflow Recovery:** Both PIMCO and Allianz Global Investors registered positive net retail and institutional asset turnarounds. Third-party Assets under Management (AuM) expanded to €1.84 trillion by December 31, 2025, supported by recovering global fixed-income cycles.

3. Capital Optimization Framework

Giulio Terzariol (CFO): Our Solvency II metric is at an elite 212%, up from 201% at the end of FY24. This massive structural buffer is net of our planned returns. The authorized €1.5 billion share buyback framework for 2026 underscores our institutional commitment to continuous, predictable distribution velocity.
